

# JOB COSTING

Real-Time Revenue, Cost and Profit Margin Analysis

## Gain Effective Control of Job Costs

The Advantzware Job Costing module is business intelligence for the modern packaging organization.

Gain the advantage of real-time tracking and analysis so unexpected surprises can be dealt with immediately before they become a larger problem. Track actual production costs of in-progress jobs and compare costs against estimates and past performance.

## A HOLISTIC PICTURE OF PROFITABILITY

Estimated cost for materials, labor, prep, outside purchases and sub-contract work are transferred to the job file and compared to actual costs that are posted to work in process.

All material and labor will show variances for actual versus estimated broken down by cost, waste and quantity. Actual production time may be transferred to the estimate for repeat jobs to more accurately show profit and improve machine planning.

Gain visibility through dozens of standard reports that show machine backlogs, variances, efficiencies, work in process values, material usage and more whereby data can be analyzed by product line, product category, job number, machine and charge code to isolate unprofitable operations.
